REGEDIT

Edytor rejestru to ogromna baza danych, w której Windows Server trzyma wszystkie ustawienia systemu, sprzętu i zainstalowanych programów. Każda zmiana tutaj działa natychmiast, ale jeden błąd (np. usunięcie złego klucza) może całkowicie uszkodzić system.

A series of hand-drawn blue arrows indicating a navigation path through the Windows Registry Editor. The path starts at the 'Computer' root, moves to 'HKEY_CURRENT_USER', then to 'SOFTWARE', then to 'Microsoft', and finally to 'Command Processor'.

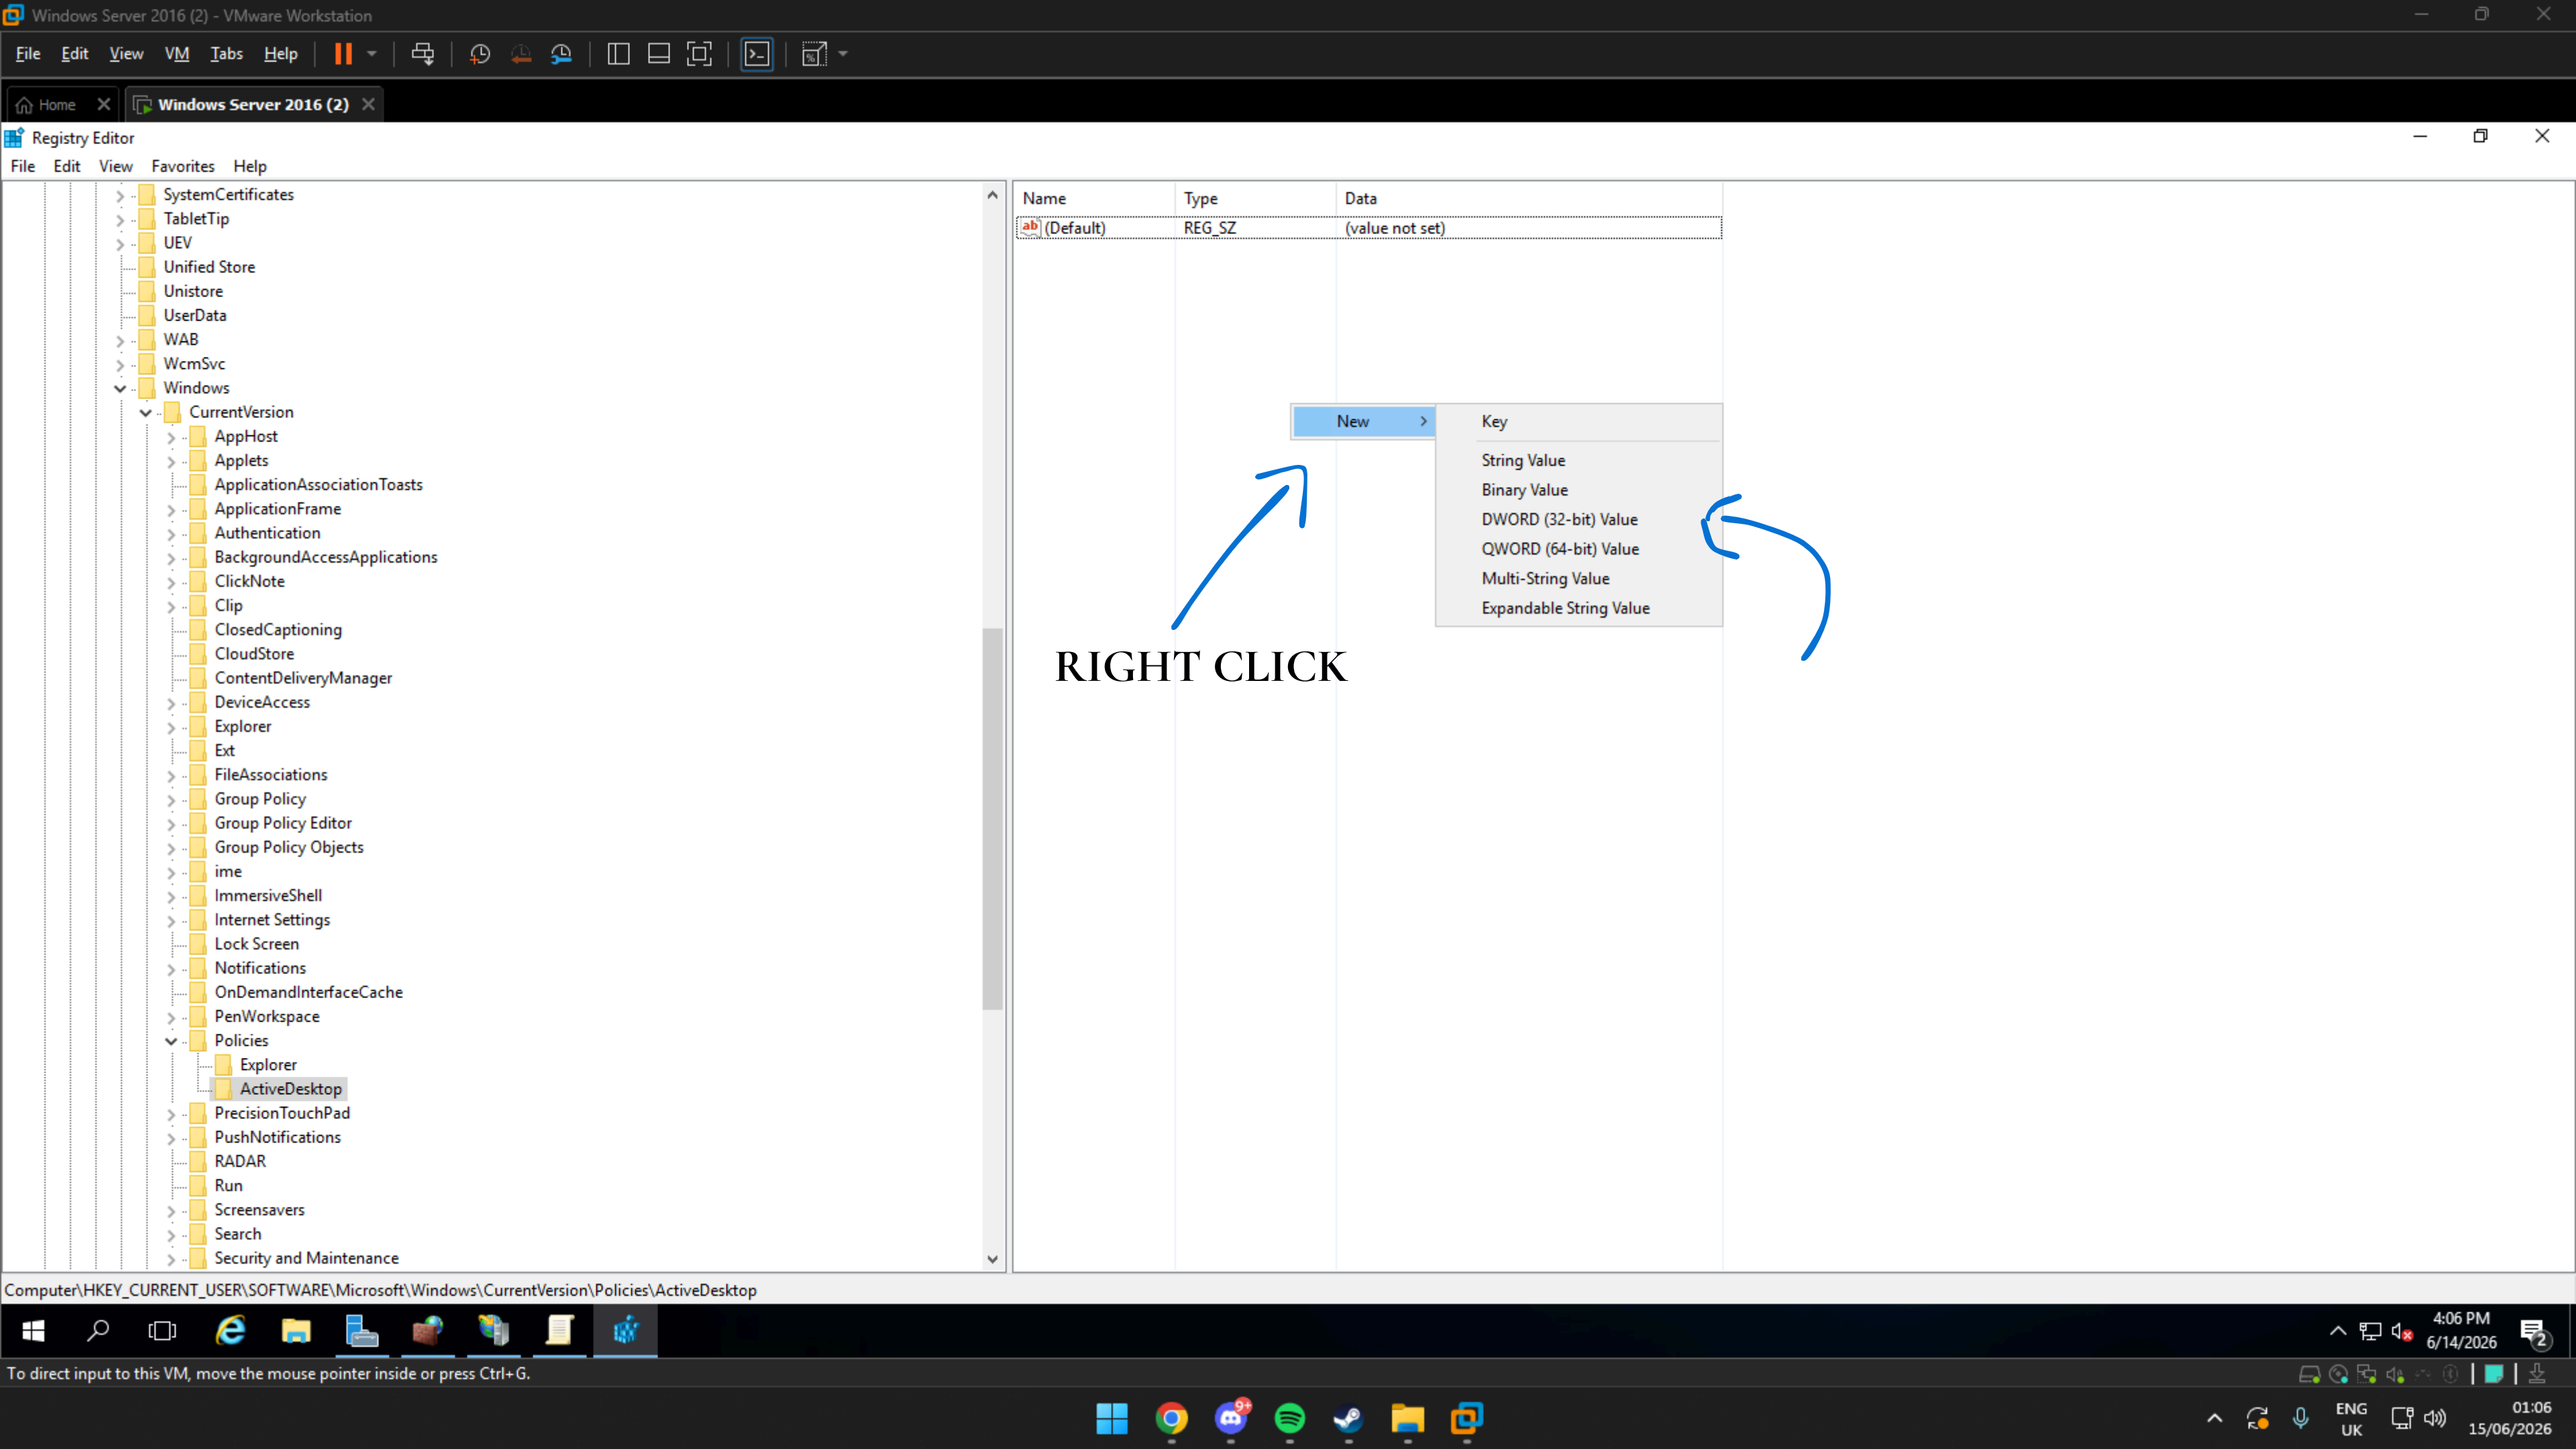

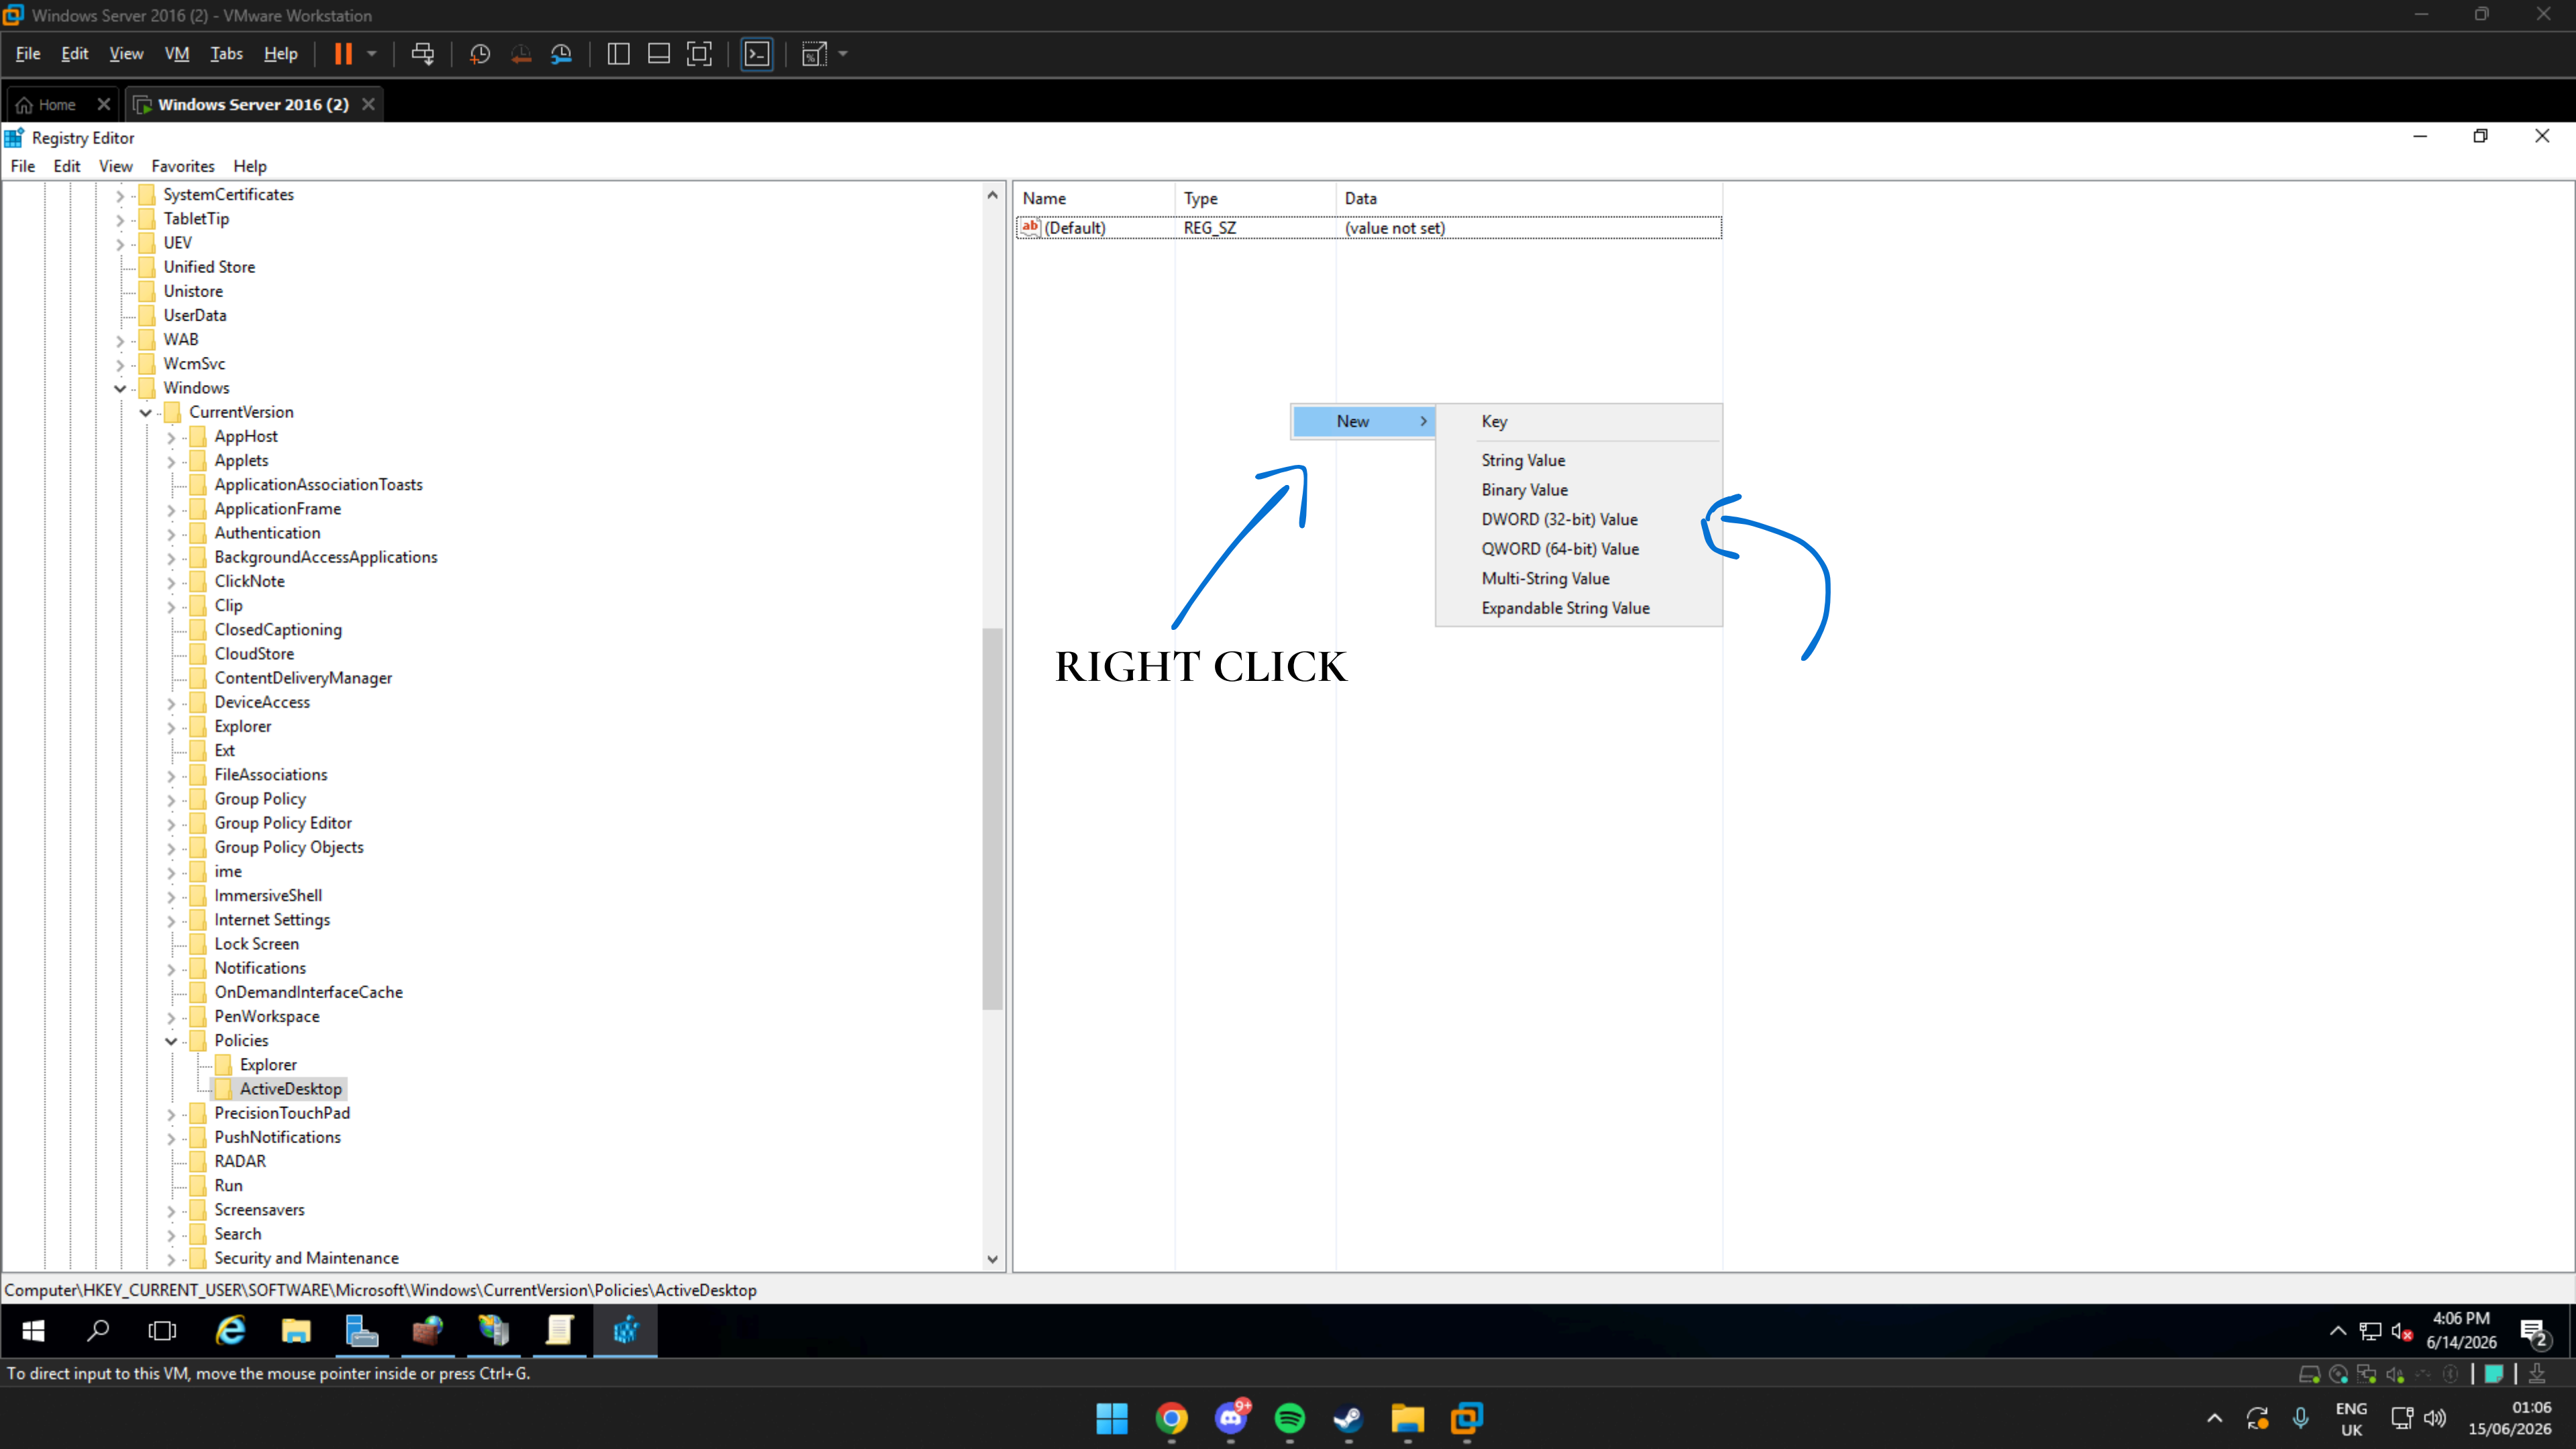

The screenshot displays the Windows Registry Editor. The left pane shows the tree structure of the registry. The 'Windows' folder is expanded, and the 'Policies' folder is selected and circled in blue. A blue arrow points from the 'Policies' folder to the right pane. The right pane shows the details of the selected registry value:

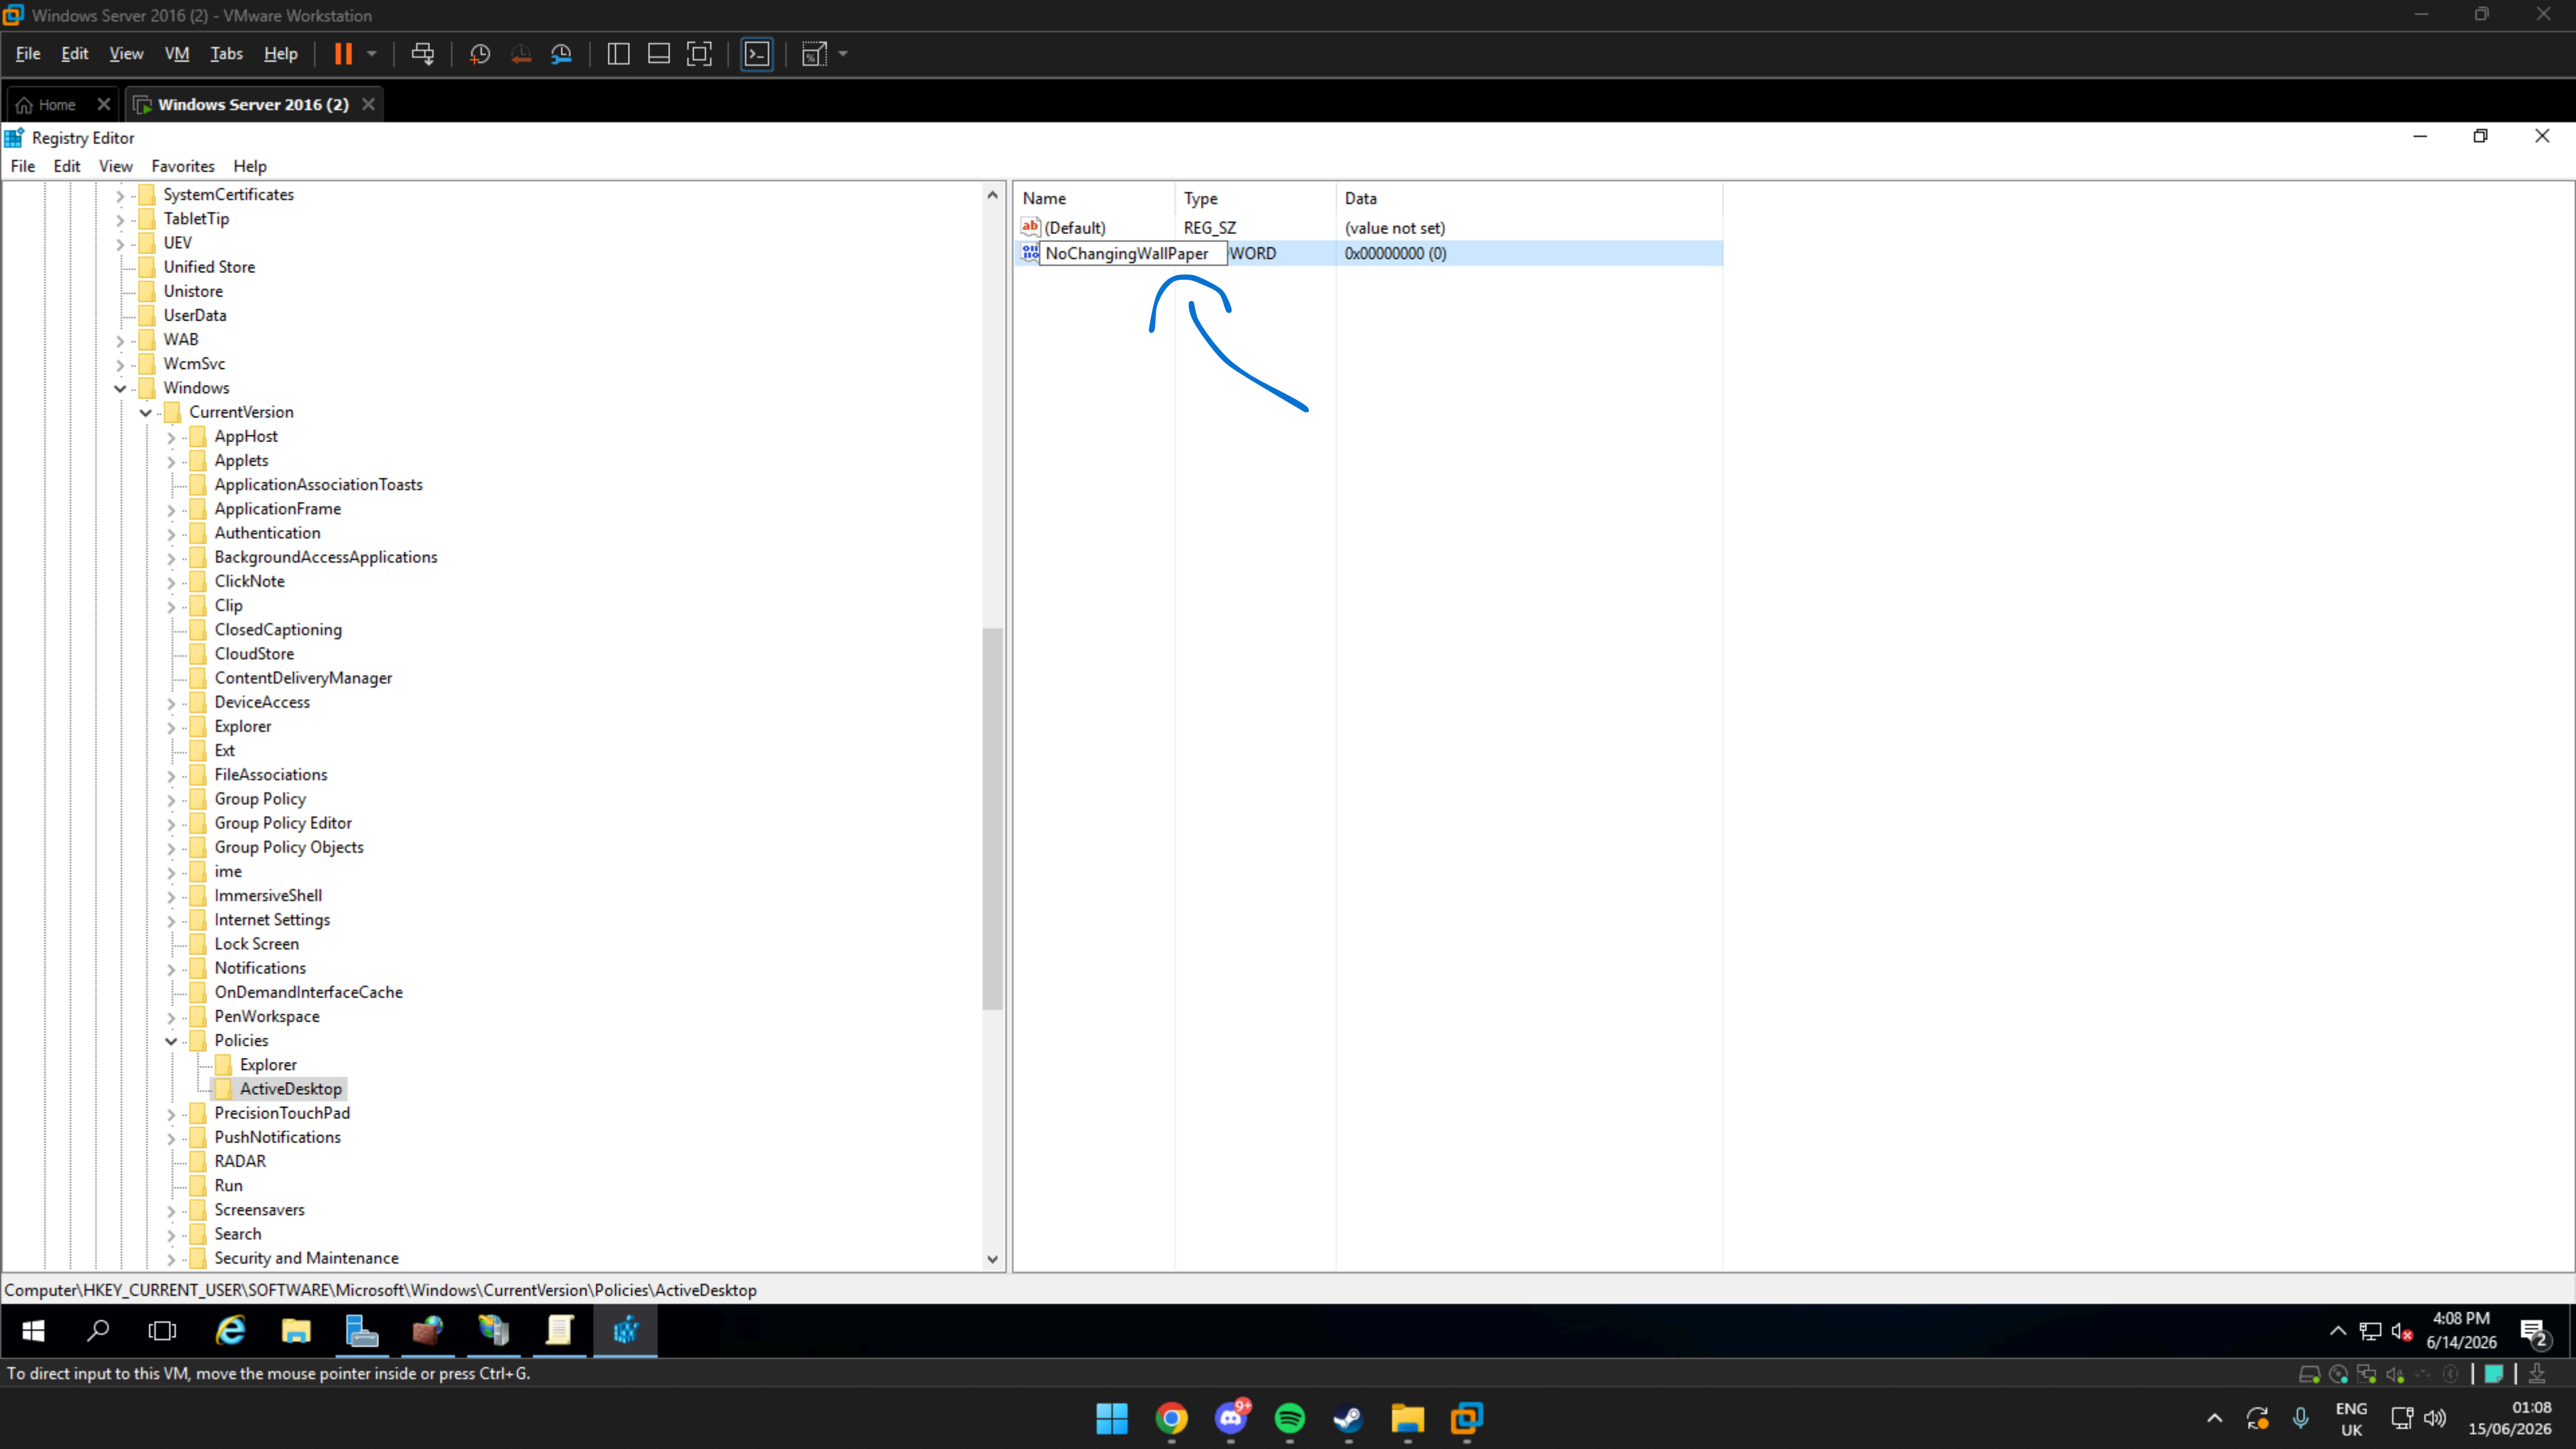

Name	Type	Data
(Default)	REG_SZ	(value not set)

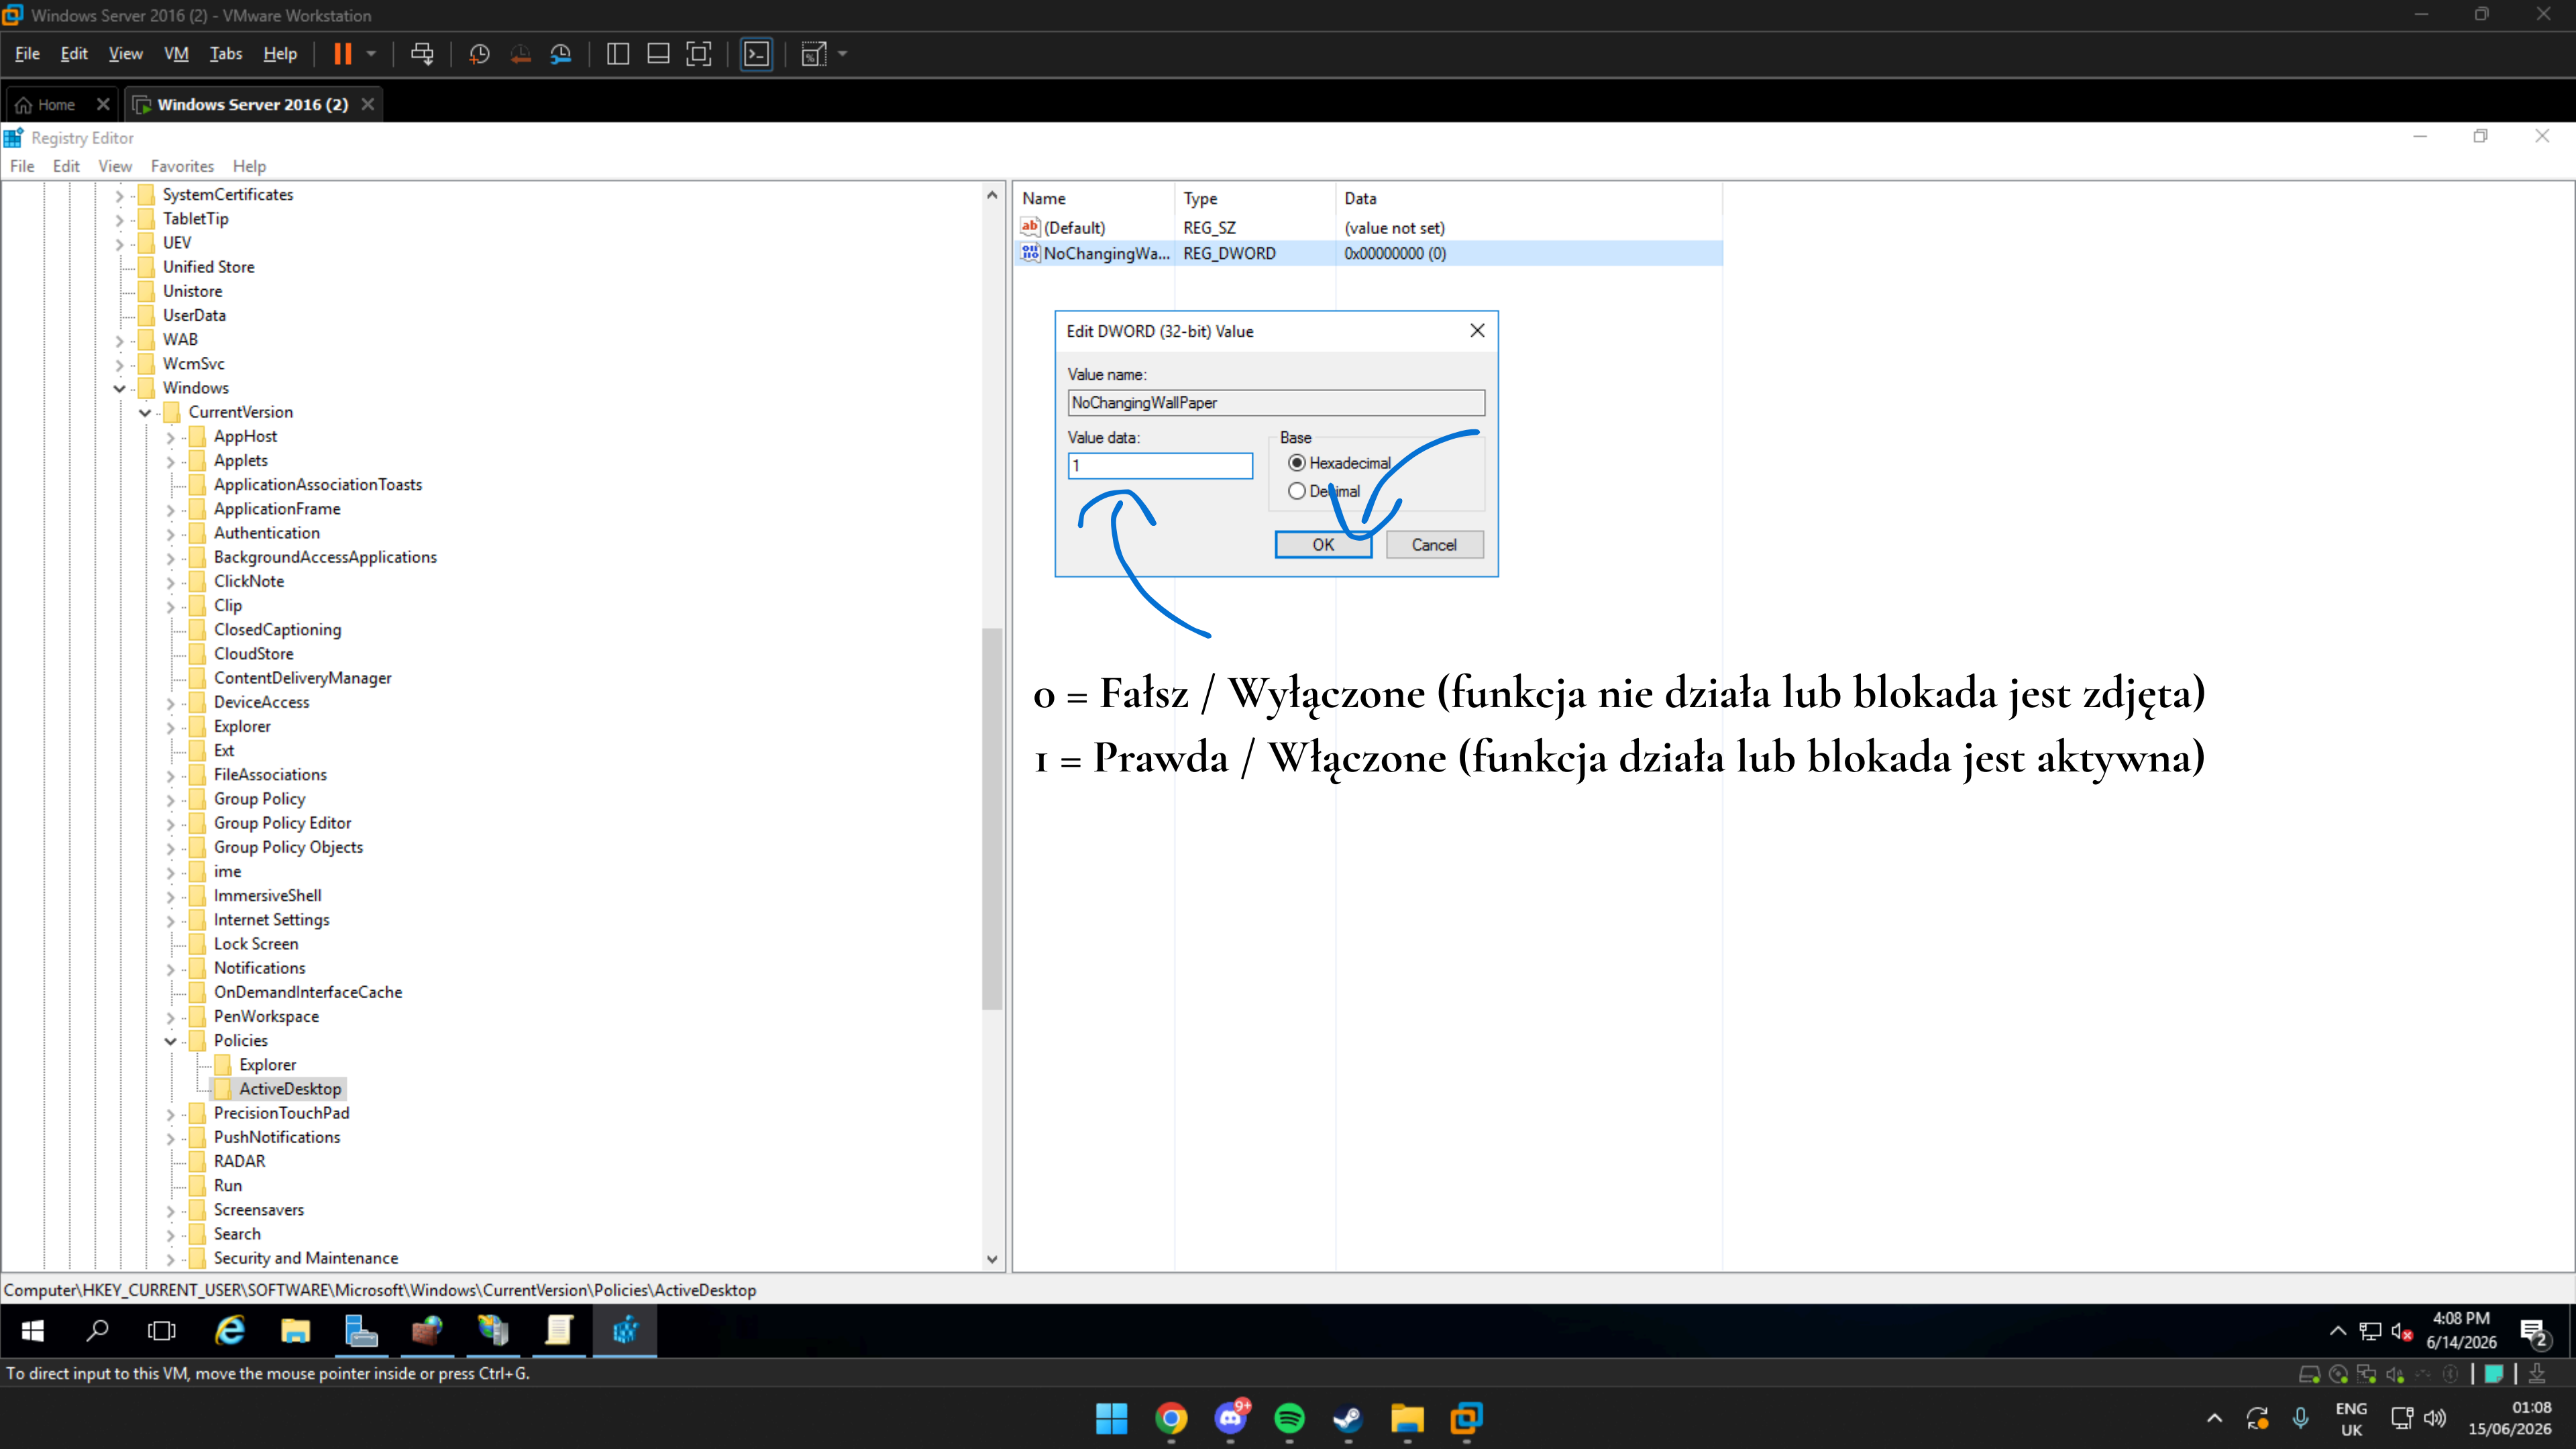

Computer\HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\CurrentVersion\ScreenSavers
